**Safety:** Handle with care. Before and during use, observe all safety labels on packaging and paint containers, consult Hempel Safety Data Sheets and follow all local or national safety regulations.

<b>Surface preparation:</b>	According to specification.
<b>Application conditions:</b>	Apply only on a dry and clean surface with a temperature above the dew point to avoid condensation. Use only where application and curing can proceed at temperatures above: 7°C/44°F. The temperature of the paint itself should be: 15–25°C/59–77°F. In confined spaces provide adequate ventilation during application and drying. Thinning may be necessary in the case of very long spray hoses and/or paint temperatures below: 15°C/59°F. This will cause lower film build and longer drying time. Alternate reducers such as Acetone may be used to reduce product without adding VOC.
<b>Preceding coat:</b>	According to specification. Recommended systems are: UREPRIME® HS2; CHEM-O-GARD LOW VOC PRIMER; CHEM-O-PON LOW VOC EPOXY PRIMER.
<b>Subsequent coat:</b>	According to specification. Recommended systems are: ACRYLITHANE™ HS2.
<b>Remarks:</b>	<p>Mixing: Mix thoroughly before use. Add 1 quart of catalyst to a 3/4 gallon of ACRYLITHANE™ HS2 and mix thoroughly again. Only apply when air and surface temperature are between 44–100°F/.</p> <p>Thinning: Add 08EJB (formerly JB21102 Fast Spray Reducer) as required. When temperature is over 70°F, use 08320 (formerly 21092 Medium Reducer). Add 08BJB (formerly 21093 Slow Reducer) to reduce dry spray and orange peel, if required.</p> <p>Drying: Under normal conditions, dries to touch in 6 hours and dries for overcoat in 4 hours for spray applications and dries for overcoat in 6 hours for brush and roll applied film. Low temperature, high humidity, poor ventilation and thick films will retard drying. Addition of accelerator 99LJB (formerly JB99041) at the rate of 0.5 fl. /oz. per mixed gallon will shorten dry times to spray overcoat at 4 hours and to touch at 7 hours.</p> <p>Pot life: Approximately 3 hours after mixing. Mix only the amount of material that can be used in 3 hours. Pot life is decreased with an increase in temperature. Mixed material should be kept in as cool a location as possible. Flush mixed material from pressure pot and lines immediately after use.</p> <p>Cleaning: Clean paint tools or spills immediately with 08320 (21092 Medium Reducer), MEK, or lacquer thinner carefully observing cautions on paint and thinner labels. Dried paint may need to be removed by scraping.</p>
<b>Overcoating note:</b>	Sanding or roughening of surface is recommended if overcoating after 2 weeks.
